- Aluminum Booster Reel w/ 200' of 1" Hose Capacity

BRUSH-MASTER

**WE BUILD OUR OWN FLATBED BODIES
BECAUSE WE COULDN'T BUY ONE THAT WAS HEAVY ENOUGH
TO LAST THROUGH THE DEMANDS THE FIRE SERVICE WILL PUT IT THROUGH**

The subframe is constructed from a combination of 3" and 4" aluminum extrusions (Grade 6061 or 6063) in a channel shape welded together in a web type configuration utilizing temperature controlled "tig" welding process. This design provides a heavy duty platform for the compartments and skid unit to be mounted onto.

The bed is supported by 4" x 2" x 1/4" extrusions that runs parallel to the chassis frame rails and mounted on top of the extrusions for a body to chassis interface.

There will be 3" x 1-1/2" x 1/4" extrusions mounted transverse of the 4" extrusions and shall be welded to the primary extrusions on 16" centers for forming the substructure web.

That's Strong!

SHOWN WITH AIR PAK COMPARTMENTS,
STORAGE COMPARTMENT UNDER PUMP.
MANY CHOICES OF PUMPS AND FOAM
SYSTEMS ARE AVAILABLE
