Professional Turnout Drying Appliance

Fire Departments, Search & Rescue and Police Departments need their protective gear organized, dry and ready to go at a moment's notice. Cyclone Drying System's Professional Turnout Drying Appliance safely dries your wet gear from the inside out in just a fraction of the normal time. Cyclone drying appliances are built to withstand the wear and tear of station life with all steel, welded construction and easy to clean powder coated finish.

Temperature controlled forced air circulates through your jackets, pants, liners, gloves, boots, helmets, *even hoses*, eliminating moisture and reducing growth of bacteria and mildew.

It's a fact: Properly drying turnout gear extends its usable life and saves money. Then add the time savings and convenience of not having to string your gear from one end of the station to the other to dry and you will soon realize the Cyclone Drying Systems not only saves time and money, it will make your job easier.

- Available in unit sizes from 1, 3, 5, 6 and 10-Turnouts.
- Ultra quiet operation—the red/green indicator light tells user when dryer is running.
- Programmable cycle, 10-60 minutes.
- Meets NFPA-1851 guideline for drying temperature.

*"This dryer is fantastic!
Your company has designed,
manufactured and delivered an
exceptional product!"*

Captain Pat Riley
Northern Lakes Fire District
